(57) **ABSTRACT**

Mebendazole is an antiparasitic drug with over 40 years of safe use. Recently mebendazole was repurposed for glioblastoma therapy. Three polymorphs of mebendazole exist, but the relative polymorph content for existing drugs varies, and the therapeutic anti-cancer relevance of the different polymorphs was unknown. As an oral drug mebendazole polymorph C is a superior form, and it reaches the brain and brain tumors in effective concentrations. Efficacy is further improved by combining mebendazole with a P-glycoprotein inhibitor. Mebendazole may also be used for therapy of other cancers, as well as a chemo-preventative agent.

COVID Intel | Dr.William Makis |

You know those low IQ people (including many doctors) who use the term “dewormer”?

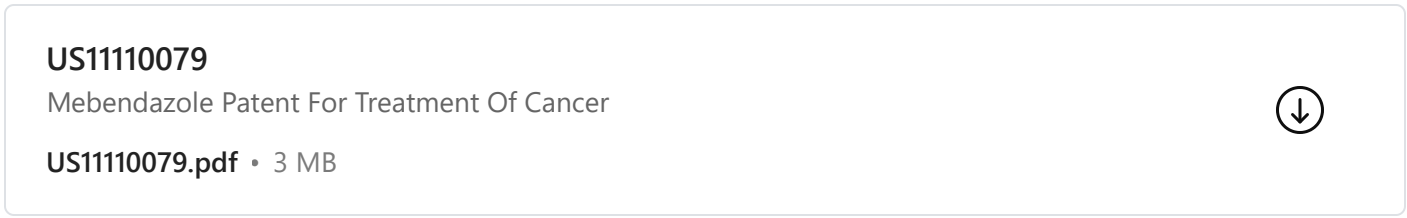
Mebendazole is an “animal dewormer” like Ivermectin and Fenbendazole.

On Sep.7, 2021, **Johns Hopkins University in Baltimore, MD secured a patent for MEBENDAZOLE for this use:**

1. Repurposed for Glioblastoma Therapy

(as an oral drug mebendazole polymorph C is a superior form, and it reaches the brain and brain tumors in effective concentrations)

2. May also be used for therapy of other cancers, as well as a chemo-preventative agent.



The title of the patent: **“Mebendazole Polymorph for Treatment and Prevention of Tumors”**

I will let that sink in.

This is what I have been working with for the past 2 years.

Everyone who has attacked me up to now, none of them ever talk about this Patent.

The WAR on terminally ill cancer patients who are exercising their “Right to Try” is real and very EVIL

If you see anyone attacking me, you will know why.
